

Road to ChatGPT : Basics of AI in Language Processing – Group Project

Part A:

We have been introduced to AI in general, and ChatGPT in particular. We have tried ChatGPT ourselves. With this backdrop, Part A of the group project provides an opportunity for you to review any existing literature on AI, reflect on its current landscape, and share with the class how this might change / disrupt / affect areas that include (but not limited to):

- Education
- Industry
- Ethics
- Others

You may choose to go broad (covering multiple areas that AI impacts), or just focus on one specific area. Some questions to guide you in your literature review and in structuring your presentation:

- How has AI benefitted this particular aspect that you have chosen?
- Have there been any negative implications?
- How has it caused disruptions, and do you foresee further disruptions (and what might these be?)
- How might we co-exist with AI in this particular aspect?

Part B:

We will be working with our imdb movie reviews dataset. Based on what we have discussed in our class, investigate ways to improve our model performance in predicting sentiment. Continue using accuracy as the metric, and binary categorical cross-entropy for loss.

Share, in your presentation, what did the group try (e.g. changing the model architecture, embedding dimension etc), were these measures effective (present charts to support your points), and your explanations of why they worked / did not work. In your conclusion, sum up your results, and suggest threads for further investigation.

In your introduction for the presentation, articulate why it might be useful to have a model that is able to predict the sentiment of movie reviews.

Group Presentation:

Work in your assigned groups. Each presentation should be around **20 minutes**.

All group members will give the presentation. Each presentation will be followed by a 5-minute question-and-answer session. The session will also be open to audience members.

Please upload a copy of your presentation slides (name the file after your group, e.g. “Group 1” etc) to the submission folder on Canvas (under “Assignments”) by 2359 the day before your presentation date.

- Please also download and submit a copy of your Kaggle notebook that you used for the project. Name this notebook also after your group name.

Only one member needs to upload for each group, on behalf of the other members.
